INTRODUCTION

This Idaho Demographic Profile for fiscal year 1989 is compiled primarily for use by socioeconomic planners. It contains a wide range of information on the population, employment, occupations, and socioeconomic characteristics of the people of Idaho. The profile includes data for the state's planning areas (see figure A) as well as statewide numbers. Data for Ada County (Boise City MSA), which is Idaho's only Metropolitan Statistical Area, are also included in many of the tables.

Description of Area

Idaho is located in the northwestern United States. It is bordered by Washington, Oregon, Nevada, Wyoming, Montana, and Canada. It is a sparsely populated state with a varied terrain of sagebrush prairies and forested mountains. The Clearwater, Salmon, Lost River, and Bitterroot Mountains are among the mountain ranges within the state's borders. Major rivers include the Salmon, Clearwater, and Snake Rivers. The rugged beauty of the land and the easy access to many outdoor activities such as boating, skiing, hunting, and fishing have helped make Idaho attractive to tourists.

Idaho has traditionally been a resource-based state, but recent years have seen manufacturing, especially electronics, rapidly growing in economic importance. Livestock, especially cattle, is important to the economy. Major crops grown by Idaho farmers include peas, alfalfa seed, Marion Kentucky Bluegrass seed, and 'famous' potatoes. Major manufacturing industries include food processing, forest products, phosphate processing into fertilizer, and electronics manufacturing. Mining has historically played an important part in the development of the state, with phosphate rock, silver, lead, zinc, and molybdenum among the resources being mined. Economic conditions of recent years have caused mining to become less important to the state's economy.

Boise MSA

There is only one Metropolitan Statistical Area (MSA) in Idaho. Areas qualifying for recognition as Metropolitan Statistical Areas have either a city with a population of at least 50,000 or a Bureau of Census Urbanized Area of at least 50,000 and a total Metropolitan Statistical Area of at least 100,000. The Boise City MSA consists of all of Ada county and is located in the southwestern part of the state. It has the largest population of any county in Idaho. Boise is the capital city of the state and is a center of activity for business and government. Like the rest of the state, Ada county has a mild climate and experiences four distinct seasons each year. Although Boise itself is lush with trees and split by the Boise River and adjacent greenbelt, the surrounding area is naturally desert-like and farmers rely heavily on irrigation to maintain their crops.

Highlights

After two years of static employment rates, Idaho finally experienced change in its 1987 Civilian Labor Force. Unemployment rates were some of the lowest since 1979, and the annual average dropped to 5.7 percent. In the past year seasonally adjusted unemployment rates ranged from 4.9 percent in September to 6.5 percent in January and February.

On the negative side, Idaho saw the average Civilian Labor Force numbers drop for the second consecutive year, to the lowest level since 1977. The 425,400 member labor force in 1987 was 1.2 percent below the 1986 level of 430,600. One bright spot was the 12.9 percent decline in the number of jobless workers from both 1986 and 1985. The decline in the unemployed sector reflects the decision of many to either leave the state to look for better employment opportunities, or to leave the job market altogether.

1987 was a year for further demographic loss for the state. Idaho's population projection for 1987 reflected a drop from 1,002,000 in 1986 to the current estimate of 998,000, a loss 4,000 residents in one year. This was a loss in population and labor force for the second consecutive year. Most of the drop can be attributed to out-migration. It is believed that 1987 was the trough in this cycle, and population patterns and labor force numbers should begin rising again in calendar year 1988. This should be reflected in higher Civilian Labor Force numbers, lower unemployment rates, and higher population numbers.

Preliminary numbers show a loss in Total Nonagricultural Wage and Salary employment. This loss amounted to 700 people, further reinforcing the negative side of economic developments in 1987. A revised count in the noncovered employment sectors coupled with a sluggish job market resulted in nonagricultural employment remaining below 1985's level of 336,900. The drop in the nonagricultural employment in 1986 was the first decrease since 1981.

The news from the Lumber and Wood industry was mixed. There was a slight increase in employment with most of the growth coming in the Sawmills and Planing Mills sector. The increase occurred in spite of a major mill being closed for remodeling most of the year. There was increased demand for lumber products which kept the mills operating at a steady pace throughout the year.

Idaho's electronics industry once again began to show growth in 1987. After a disastrous year in 1986, the industry showed some positive movement with Micron Technology announcing a major plant expansion with additional hiring in 1988. After what had seemed a good year for the North Idaho-based Advanced Input Devices (AID), the company announced a plant closure at Post Falls and the layoff of workers at its Couer d'Alene plant. The other electronics manufacturers in the state made a healthy showing, with

Hewlett Packard noting a healthy demand for its new laser printers, and Heath in Glenns Ferry expanding their production.

Food and Kindred Products made some modest gains in employment after losing numbers in 1986. Many of the major plants were being modernized in 1986 to make them more efficient and competitive. Average employment increased by 800 workers to 16,200 but was still below the 1985 level of 16,600.

News in the Mining industry was mixed. With announcements made late in the year of the opening of mines in the Silver Valley, residents had cause for optimism for the first time since the last quarter of 1981.

FIGURE A

PLANNING AREAS

Review By Area

North Idaho The Emerald Empire, consisting of the five northern Idaho counties, should continue to show improvement over the next year. However, the decrease in the unemployment rate should not be nearly as impressive as the past year has been. Several new projects will contribute to this growth including the Coeur d'Alene Greyhound Park, and several small manufacturers planning to locate there.

Northcentral Idaho Northcentral Idaho has turned the economic corner. Increased international competition and soft markets for lumber and agriculture drove the number of jobs down through 1985 and 1986. This trend seems to have been reversed in the last quarter of 1987 and the first quarter of 1988. Gains in employment are expected through 1989. Increases in lumber price and demand, retail and service expansion, and better times for farmers have combined to brighten our economic future.

Southwest Idaho Lumber and Wood Products and general manufacturing should be stable through the remainder of 1988. Mining activity will be picking up more employees through the summer months and on into the fall. Food processing employment and activity, particularly frozen potato products will remain steady, subject to the normal seasonal layoffs that occur during the summer months. Agriculture and agricultural employment is the question this year due to the projected shortage of irrigation water. If the weather continues to be dry and more farmers set aside land in federal programs, there could be a decrease in labor demand.

Southcentral Idaho A mixed year awaits the Magic Valley in 1989. Even with some successful efforts in economic development and the opening of some new manufacturing businesses in the valley, the closing of the Tupperware plant will still have some serious, lasting effects on the area. While the agricultural economy will be aided in this drought period by the low international value of the dollar, land holdback policies will decrease demand for labor in direct agricultural employment and employment in agricultural related industries.

Southeast Idaho The labor force and employment levels will continue to decline, though at a slower rate than in the past few years. Farming operations will continue to shrink in number as drought, low commodity prices, high real interest rates, and low land values bankrupt more farmers. Economic activity will continue to stagnate as more marginal businesses close, few new businesses succeed and construction activity remains at historically low levels. The out-migration of workers and families will more than likely continue resulting in little or no population growth, a declining tax base and lowered governmental support for community schools and infrastructure.

Northeast Idaho Northeast Idaho's economy is healthy and continued growth is predicted. Not huge growth, but a steady increase in employment and in salaries. While Northeast Idaho is oversupplied in some labor areas, there is great demand in others. Expectations are that Fiscal Year 1989 will be another good year in Northeast Idaho.

Population

The population projections in this report were developed by the Research and Analysis Bureau. Data from the 1980 census, 1987 population estimates, survival rates from the Bureau of Labor Statistics, and Idaho birth rates were used in making these projections. See appendix for further detail.

Idaho's population continues on a gradual increase. Idaho's 1989 projected population is 1,042,000, a 10.5 percent increase over the 1980 census total.

Table 1 gives total, male, and female population for each county and area within the state. Table 2 lists detailed age breakouts for the state and all six planning areas. Table 3 presents data for the population 16 years old and older broken out by sex and age within planning areas and the state. Table 4 shows county population by age groups 16 years and older. Table 5 gives projected race/ethnic group totals for each county. County and area population density is presented in Table 6. Data for Asotin County, Washington, is also included in this table.

Labor Force

To be considered in the labor force, a person must be 16 years of age and either employed or unemployed and actively seeking work. The term **Civilian Labor Force** excludes members of the armed services. The Department of Employment deals primarily with the Civilian Labor Force. The projected county labor force data was estimated using preliminary 1987 annual average labor force by county. A ratio between the county annual average labor force and the statewide labor force for 1987 was developed and applied to the projected 1989 statewide labor force. The sex, age, and racial breakouts of labor force were derived by applying the 1980 census ratios to the 1989 projected labor force data. The area data are sums of the data for the counties which make up the areas.

Idaho's labor force is projected to be 436,700 in 1989. This is a 2.8 percent increase from the 1980 labor force of 424,447. **Table 7** presents projected 1989 labor force, employment, unemployment, and unemployment rates by county. **Table 8** lists the data for the 1989 projected labor force by sex for counties, service delivery areas, and the state. **Table 9** gives a county breakdown of labor force by age group (16 years and older). **Table 10** presents the projected 1989 labor force by race in the areas. Because of census suppression of county data for some races, the data in this table are presented in only white and nonwhite classifications. **Table 11** presents projected 1989 labor force by age within the same areas. Projected 1989 labor force by race/ethnic group within county is shown in **Table 12**.

Unemployment and Unemployment Rates

The projections for county unemployment were made using preliminary 1987 annual average unemployment data for each county. Ratios of the county annual average unemployment for 1987 were developed and applied to the projected 1989 statewide unemployment total. The sex, age, and racial breakouts of unemployment were derived by applying 1980 census ratios to the 1989 projected number of unemployed. The area data are sums of the data for the counties which make up each area.

The total number of unemployed in Idaho for 1980 was 27,283. The fiscal year 1989 projection is 25,900, a significant decrease. The unemployment rate is expressed as a ratio of the number of persons unemployed to the number of persons in the labor force as a whole. In 1989, Idaho's unemployment rate is expected to be 6.3 percent of the labor force, slightly below the levels experienced in 1985, 1986, 1987 and 1988. See Table 7 for projected county unemployment rates for 1989.

Table 13 lists unemployment by sex for 1989 for each county, service delivery area, and the state. Table 14 shows unemployment by county broken into age groups: 16 to 21 years, 22 to 54 years, and 55 years and up.

Projected unemployment by age group within area is presented in Table 15, using the same age groups as the previous table. Table 16 lists projected unemployment by race within area; the racial breakdowns are white and nonwhite due to census data suppression. Projected 1988 unemployment by race/ethnic group within county is presented in Table 17. This table, too, shows some data suppression.

Tables 18 and 19 present projected 1988 unemployment rates by age and sex within area. Statewide and Ada County rates are also given in each of these tables. The Idaho Department of Employment calculates the monthly unemployment rates shown in Table 20A. This series is designed for use in tracking economic trends and is seasonally adjusted. The data shown in Table 20B are calculated using the same data base and then adjusted to the Current Population Survey. Data in this table are not designed to be an economic series and are not seasonally adjusted. Table 20B should be used in the allocation of federal revenue. In both the latter tables, there is a series break between 1979 and 1980 due to a revision to include 1980 census residency factors.

Characteristics of UI Claimants

Tables in this section present data on the characteristics of those persons who filed for Unemployment Insurance (UI) benefits with the Department of Employment during calendar year 1987. The data presented is based on a 20 percent sample of claimants who were surveyed after filing their claims. Survey response was inflated by a factor of five to estimate total claimants for the tables in this section: i.e., each survey response represents five claimants. Keep this limitation in mind when using data from these tables.

Table 21 presents area totals of UI claimants by race, as well as the total number of claimants in each area. Table 22 shows the highest level of schooling completed by the survey respondents. Table 23 presents area-specific data on UI claimants by sex and duration of their unemployment. Many of the 0 weeks claimed shown in this table and in Table 26 represent people who were found to be ineligible for Unemployment Insurance benefit payments. Many of these claimants were people who filed for extended benefits but who were required to file for regular benefits to determine their eligibility before filing for extended benefits.

Table 24 lists claimants by the industry of their principal employer prior to filing for UI benefits. UI claimants by age and sex within areas are listed in Table 25.

Table 26 presents area data on the percentage of claimants by duration within industry of the claimant's principal employer. From this table, one can get an idea of which industries tend to produce long or short term unemployment. Once again, the category of 0 weeks claimed includes many people who were found to be ineligible for UI benefits, as well as some who were required to file for regular benefits before filing for extended benefits.

Table 27 lists, by area, claimant's occupation and the industry of their principal employer. The data is expressed as a percentage of the occupational categories; i.e., of all the people in an occupational category who claimed benefits, what percentage had been working in each industrial sector. The final table in this section is not derived from the same data base as the others. Table 28 lists statewide annual averages of unemployed persons by reason for unemployment for the years 1977 through 1986. This data is compiled by the Bureau of Labor Statistics and is published in Geographic Profile of Employment and Unemployment.

Table 21

UI CLAIMANTS BY RACE WITHIN AREA

1987 TOTALS

	Area I	Area II	Area III	Area IV	Area V	Area VI

Occupational Information

Table 29 presents calendar year 1987 annual average employment by industry within county for employment covered by the Idaho Employment Security Law. This data is also compiled and published quarterly; similar data is published annually by the Department of Employment in a booklet titled Basic Economic Data for Idaho. These publications can be ordered by contacting the Research and Analysis Bureau at 334-6168.

Table 30 lists 1980 census information on class of worker by county. This information is not available for more recent years. The next three tables present occupational information from the 1980 census. Again, this data has not been updated since the census. Table 31 lists major occupational groupings by area and for the state. Table 32 presents the same type of information on a county level. These two tables include only those persons who were employed at the time the census was taken. Table 33 lists occupational data for the state broken out by race and sex. The totals on this table are higher than those for the two previous tables because they include data for those persons who were unemployed at the time the census was taken, but who listed their most recent occupation if they had worked in the previous five years.

Socioeconomic Characteristics

The 1980 Census of Population is the basis for much of this type of information. The census publications contain much more detailed information than we can present here. Included in this section is information on income, poverty, wages, and welfare recipients.

Table 34 presents Idaho personal income by major sources for the years 1984 through 1986. Personal and per capita income by county for the years 1984, 1985, and 1986 are presented in **Table 35**.

Annual Wages in Idaho (**Table 36**) lists calendar year total wages paid by industry within county in 1987. Total wages paid during the year by employers covered under Idaho's Employment Security Law are presented in this table. This information is also compiled and published on a quarterly basis by the Idaho Department of Employment.

Table 37 gives the average hourly salaries for selected occupations in Idaho. This information is taken from the Idaho Occupational Wage Survey, which presents the results of an annual survey conducted by the Idaho Department of Employment. That publication included similar data by industry and region within the state.

Table 38 lists total public school enrollments and high school dropouts for the years 1982 through 1989. Dropouts for 1988 and 1989 and enrollment for 1989 were estimated from previous year's data. The data presented on dropouts includes only secondary schools: that is, grades 7 through 12. This information was supplied by the Idaho Department of Education.

Table 39 presents the 1988 projected number of economically disadvantaged persons in Idaho within county and area by age group. This table is based on information provided by the U.S. Department of Labor from the 1980 census. The information presented in **Tables 40 and 41** are the most current standards for poverty levels and the 70 percent of lower living standard income level. These measures of poverty are updated annually. **Table 42** lists the fiscal year 1989 projection for persons below poverty by race within county.

Tables 43 and 44 present fiscal year 1987 annual average totals for public assistance recipients. Data for these tables, as well as for **Table 45**, were provided by the Idaho Department of Health and Welfare. **Table 45** gives statewide data on the age and sex of persons receiving public assistance by the program. The data presented in this table are tabulated as of December 1987.

Table 46 gives statewide and area data on disadvantaged and displaced applicants by sex and age. **Table 47** presents disadvantaged and displaced applicants by age and education.

Data for these tables is collected at local Job Service offices. Because the selection process is based simply on those members of the labor force who choose to list themselves with Job Service and because the information is gathered optionally, the system is not a representative sample of the Idaho labor pool. If this limitation is kept in mind, however, the level of detail can be useful in trying to get a general idea of the dynamics of Idaho's labor force.

Table 34

IDAHO PERSONAL INCOME BY MAJOR SOURCES, 1984-1986
(Millions of Dollars)

	1984	1985	1986
EARNINGS BY PLACE OF WORK	7,490	7,854	8,059

TABLE 40

1988 FEDERAL POVERTY INCOME GUIDELINES

SIZE OF FAMILY UNIT	12-MONTH MAXIMUM
1	\$ 5,770
2	\$ 7,730
3	\$ 9,690
4	\$11,650
5	\$13,610
6	\$15,570
7	\$17,530
8	\$19,490

For family units with more than eight members, add \$1,960 for each additional member.

* To be used in determining whether individuals meet the economically disadvantaged criteria set forth in the Job Training Partnership Act (JTPA).

TABLE 41

70% OF LOWER LIVING STANDARD INCOME LEVEL (LLSIL)
(Effective June 30, 1988)

SIZE OF FAMILY UNIT	12-MONTH MAXIMUM
1	\$ 4,970
2	\$ 8,140
3	\$11,180
4	\$13,800
5	\$16,280
6	\$19,040

For family units larger than six members, add \$2,760 for each additional family member.

DISCLAIMER ON STATISTICAL USES OF LLSIL

It should be noted that the publication of these figures is only for the purpose of determining eligibility for applicable JTPA programs. The Bureau of Labor Statistics has not revised the lower living family budget, and has no plans to do so. The CPI adjustments used to update the LLSIL for this publication are not directly comparable. Thus, these figures should not be used for any statistical purposes, and are valid only for eligibility determination purposes under the JTPA.

Employment Service Automated Reporting System

The final section of this report is a reproduction of the latest Idaho Department of Employment Employment Service Automated Reporting System (ESARS) statewide report. This report is a matrix of information concerning job applicants on file with local Job Service offices. The selection process is based only on members of the labor force who list themselves as seeking employment at a Job Service office, and this bias must be recognized when making inferences about the entire labor force. With this limitation in mind, however, the ESARS data is invaluable when studying the characteristics of Idaho's labor pool. The data in Tables 49A-49D are not cumulative totals, but are a record of applicants on file when the planning year ended June 30, 1987.

Table 48 below gives some accumulated totals for program year 1987 taken from ESARS Table 91. This program year extends from July 1, 1986 to June 30, 1987.

Table 48

- DATA NOT AVAILABLE.

APPENDIX

Methodology and Data Sources

The Department of Employment's projected 1989 population for Idaho is the basis for much of the information presented in this report. The following data were utilized in making the 1989 Idaho population projections:

1980 Census of Population - Bureau of the Census

1981 through 1985 Population Estimates - Bureau of the Census

1980 through 1985 County Birth Rates - Bureau of Vital Statistics

The 1980 census population by age for each of Idaho's counties was the starting point. Five-year survival rates were applied to the census population to estimate deaths; 1980 through 1985 birth rates were applied to estimate births. This 'survived' 1985 population was then adjusted to match the 1985 Census Bureau population estimate. Then this 1985 population was projected through 1989 using three-year survival rates and 1985 birth rates to produce 1989 population projections by age within county. The Census Bureau, in making its estimate of 1985 county population, included migration as an influence. We do not have reliable data on migration for the three years we project beyond the "Census Bureau's estimate; therefore, it has not been included in the formula for making our population projections.

The following section will give a short explanation of data sources and methodologies for the information contained in this report. Further information concerning methodology may be obtained from some of the source agencies. Each entry in this appendix section refers by table number to a table or tables in the text.

Tables 1 through 6 - County population projections for 1989 by age (see methodology section above) were apportioned according to the 1980 Census of Population. Ratios of sex and race/ethnic groups to total county population were developed and applied to the 1989 population projections. County data was accumulated to the area level for tables presenting area data.

Tables 7 through 19 - The Department of Employment estimated 1989 Labor Force and Unemployment for Idaho statewide. County 1989 labor force and unemployment data was estimated using the 1987 preliminary annual average data for each county. Ratios of county data to statewide data were developed and applied to the projected 1989 statewide labor force and unemployment totals. The sex, age, and racial breakdowns were derived by applying 1980 census ratios to the 1989 projected labor force and unemployment data. Unemployment rates were calculated by dividing total unemployment by total labor force for each area.

Tables 20A and 20B - The Idaho Department of Employment calculates the monthly unemployment rates shown in Table 20A. This series is designed for use in tracking economic trends and is seasonally adjusted. The data shown in Table 20B are calculated using the same data base and are then adjusted to the Current Population

Survey. Those data are not designed to be an economic series and are not seasonally adjusted. Table 20B should be used in the allocation of federal revenue. There is a series break in both of these tables between 1979 and 1980 because of a revision to include 1980 census residency factors.

Tables 21 through 27 - The Continuous Wage and Benefit History (CWBH) survey, a 20 percent sample of persons who filed for Unemployment Insurance benefits, was used to build the data base from which the information for these tables was taken. The survey is done by the Research and Analysis Bureau of the Department of Employment. Survey response is inflated by a factor of five to estimate total claimants for the tables in this section; i.e., each survey response represents five claimants in the tables. Keep this limitation in mind when using data from these tables.

Table 28 - Source: Geographic Profile of Employment and Unemployment, Bureau of Labor Statistics, U.S. Department of Labor.

Table 29 - Idaho Department of Employment. Note: This data is for only those workers covered under Idaho's Employment Security Law.

Table 30 through 33 - 1980 Census of Population, Bureau of the Census, U.S. Department of Commerce.

Table 34 - U.S. Department of Commerce, Survey of Current Business, April 1986, Volume 66, Number 4.

Table 35 - Bureau of Economic Analysis, U.S. Department of Commerce.

Table 36 - Idaho Department of Employment. See note regarding Table 29 above.

Table 37 - Idaho Occupational Wage Survey. Research and Analysis Bureau, Idaho Department of Employment.

Table 38 - The Idaho Department of Education provided 1980-1987 enrollment totals and 1980-1987 total dropouts for secondary schools (grades 7 through 12). Enrollment for 1989 was estimated by subtracting 12th graders and adding 6th graders to the 1987 enrollment totals. Dropouts for 1988 and 1989 were estimated by applying an average percentage change in dropouts over the years 1980 through 1987.

Table 39 - 1989 projected by county was apportioned using ratios derived from the 1980 Census of Population. JTPA defines the term economically disadvantaged as, among other things, an individual who is a member of a family which has received a total family income for the previous 6 months (on an annualized basis) which, in relation to family size, was not in excess of the higher of the poverty level determined in accordance with criteria established by the Office of Management and Budget, or 70 percent of the lower living standard income level. These measures are updated annually and are presented in Tables 40 and 41.

Table 40 and 41 - Idaho Department of Employment JTPA Procedures Manual and Federal Register, Volume 50, Number 130, July 8, 1985.

Table 42 - Total persons below poverty in each county was estimated based on the ratio of total county population to persons below poverty in the 1980 Census of Population. Race/ethnic breakouts were estimated based on ratios of each race/ethnic category to total persons below poverty in each county.

Tables 43 through 45 - Research and Statistics Unit, Division of Welfare, Idaho Department of Health and Welfare.

Tables 46 through 47 - The Idaho Department of Employment's National System Data Base Interface (NSDBI) file is the data base of applicant characteristics collected at local Job Service offices. The data is the same as that used in the ESARS system and is not a representative sample of Idaho's population or labor force. It can be useful as a tool if this limitation is kept in mind.

Tables 48 and 49A-D - Employment Service Automated Reporting System, Idaho Department of Employment.

DEFINITIONS

Bureau of Labor Statistics (BLS) - Established in 1884 and now part of the U.S. Department of Labor, this federal agency functions as the principal data gathering agency in the field of labor economics. BLS collects, processes, analyzes and disseminates data relating to employment, unemployment, the labor force, productivity, prices, family expenditures, wages, industrial relations, and occupational safety and health. The Idaho Department of Employment contracts with BLS to provide certain state economic data.

Bureau of the Census - A bureau of the U. S. Department of Commerce, this agency conducts a census of population and housing every 10 years and censuses of agriculture, business, governments, manufacturers, mineral industries, and transportation at 5-year intervals. It also conducts the monthly Current Population Survey for the BLS.

Census - A count (as opposed to a sample) of a specific population or some other characteristic in a given area (housing, industry, etc.) and the statistical information derived from it.

Civilian Labor Force - All persons 16 years of age and over residing within a specific geographic area, excluding members of the armed forces, who are classified as employed, unemployed and seeking employment, or involved in a labor dispute.

Claim - A notice of unemployment filed to request determination of eligibility and the amount of benefit entitlement, or to claim benefits or waiting period credit.

Claimant - A person who files either an initial claim or a continued week claimed under (1) any state or federal unemployment compensation program or (2) any other program administered by the state agency.

Covered Employment - Those jobs covered by the unemployment compensation tax programs. At this time, those not covered include some agricultural workers, and all self-employed workers.

Current Population Survey - A survey of personal interviews conducted monthly by the Bureau of the Census for the Bureau of Labor Statistics. The sample consists of about 60,000 households nationwide selected to represent the U.S. population 16 years and older. Households are interviewed on a rotating basis, so that three-fourths of the sample is the same for any two consecutive months. The survey provides monthly statistics on employment, unemployment, demographic data, and related subjects for the nation, states, and other selected areas. The data are analyzed and published by the Bureau of Labor Statistics.

Displaced Worker (Dislocated Worker) - Except for those individuals who are seasonally unemployed, individuals will be eligible for participation in Title III of the JTPA if they are a member of one of the following groups of eligible individuals:

- a. Recently dislocated workers - Those individuals who have

been laid off from employment no more than two years prior to the date of application; and who are unemployment insurance claimants or unemployment insurance exhaustees; and who have not held suitable employment during the 12 months immediately prior to application.

b. Workers dislocated as a result of a plant closure - Those individuals who have received a notice of lay-off or those who have been laid off no more than five years prior to the date of application from any position in a plant or facility which has been eliminated as a result of the closure of that plant or facility.

c. Long-term unemployed - Those individuals who are unemployed at the time of application; and who have been unemployed during 15 of the 26 weeks immediately prior to application.

Economically Disadvantaged - An individual who (A) receives or is a member of a family which receives cash welfare payments under a federal, state, or local welfare program; (B) who has or is a member of a family which has received a total family income for the six-month period prior to application for the program involved (exclusive of unemployment compensation, child support payments, and welfare payments) which, in relation to family size, was not in excess of the higher of (1) the poverty level determined in accordance with criteria established by the Director of the Office of Management and Budget, or (2) 70 percent of the lower living standard income level; (C) is receiving food stamps pursuant to the Food Stamp Act of 1977; (D) is a foster child on behalf of whom state or local government payments are made; or (E) in cases permitted by regulations of the Secretary of Labor, is a handicapped adult whose own income meets the requirement of clause (A) or (B), but who is a member of a family whose income does not meet those requirements.

Handicapped Individual - Any individual who has a physical or mental disability which for such individual constitutes or results in a substantial handicap to employment.

Industry - As used in the compilation of economic statistics, describes a type of economic activity engaged in by a firm or group of firms.

Job Training Partnership Act (JTPA) - A federal law which became effective on October 1, 1982, with the purpose of establishing programs to prepare youth and unskilled adults for entry into the labor force and affording job training to those economically disadvantaged persons and other individuals facing serious barriers to employment, who are in special need of such training to obtain productive employment.

Lower Living Standard Income Level - That income level (adjusted for regional, metropolitan, urban, and rural differences and family size) determined each year by the Secretary of Labor based on the most recent "lower living family budget" issued by the Secretary of Labor.

Metropolitan Statistical Area (MSA) - To qualify as an MSA, an area must have either a city with a population of at least 50,000,

or a Bureau of the Census urbanized area of at least 50,000 and a total metropolitan population of at least 100,000. Each MSA must have one or more central counties, containing the area's main population concentration. It may also include outlying counties which have close economic and social relationships with the central counties. Outlying counties must have a specified level of commuting to the central counties, and must also meet certain criteria regarding metropolitan character, such as population density.

Occupation - The name or title of a job, identifying various job duties of a worker.

Per Capita Income - A measure of income by unit of population (per person). The formula is: $\text{Personal Income} / \text{Population of Area} = \text{Per Capita Income}$

Personal Income - Income received from all sources minus contributions to social insurance, retirement plans, and social security.

Plant Closure - A plant closure is intended to encompass the permanent closure of an entire plant or facility. However, if a portion of a plant closes on a permanent, non-seasonal basis and the occupation of the workers displaced by the partial closure is not available currently anywhere else in the company or within the labor market area, the individual may be considered a dislocated worker.

Population Estimates - The Bureau of the Census annually prepares total population estimates for states and selected substate areas. Provisional population estimates appear in the P-26 Series and interim estimates in the P-25 Series.

Poverty Level - The annual income level at or below which families are considered to live in poverty. It is annually determined by the Department of Health and Human Services.

Ratio - Expresses the size of one number in relation to another number. A ratio is obtained by dividing the number which serves as the basis of comparison into the number which is being compared to it. For example: 140 is twice as large as 70; thus the ratio of 140 to 70 is 2 to 1.

Sample - A group of items selected from a larger group for the purpose of estimating the properties of the total group. The data obtained from a representative sample are usually sufficiently accurate in their reflection of the total group to identify trends and for other analytical purposes.

School Dropout - An individual who is neither attending any school nor subject to a compulsory attendance law and who has not received a secondary school diploma or a certificate from a program of equivalency for such a diploma.

Seasonal Adjustment - Statistical modifications made to compensate for predictable fluctuations which occur more or less regularly every year in a time series such as unemployment rates. These fluctuations can be so strong as to distort underlying changes in trends. For this reason, unemployment rates are reported on a

seasonally adjusted basis, compensating for such influences as the summer closing of the schools, temporary hiring for the holiday season, seasonal style changes, and the like. Such adjustments facilitate the evaluation of the more important underlying reasons for month-to-month changes in joblessness.

Series Break - An interruption in a time series caused either by a change in definition or in methodology, which makes it improper to compare data from after the change with data from before the change.

Service Delivery Area (SDA) - A geographic area that has been designated by the Governor, pursuant to Section 101 of the Job Training Partnership Act to provide for delivery of job training program activities and governed by the partnership between the Private Industry Council and local elected officials.

Survey - A study of all or a portion of the whole, conducted for the purpose of making generalized statements about the whole.

Unemployed Disqualified - Persons who are disqualified from receiving benefits for separation issue nonmonetary reasons, but are able to work and are available for work.

Unemployed Exhaustees - Unemployed persons who have exhausted all of their unemployment compensation benefits and are no longer eligible for any further benefits.

Unemployment Insurance - A program for the accumulation of funds paid by employers, to be used for the payment of unemployment insurance to workers during periods of unemployment which are beyond their control. Unemployment Insurance replaces part of the worker's wage loss if he becomes eligible for payments.

Unemployment Rate - The number of persons unemployed, expressed as a percentage of the civilian labor force.
